Bot Project

**Bot name:** LilBottie (lilbot@webex.bot)

The goal of my bot is to search and send picture files of .gif format. In order to perform this task, another API needed to be applied as well – giphy_client.

Through the API, it is possible to access the Giphy platform resources – mainly various gifs and stickers.

The way of bot working is presented as follows:

The "keyword" which triggers the bot is "Gif" followed by gif topic, which we want to search for. After a while, a picture is sent to the conversation.

Example pictures:

Bot command
